DATA DICTIONARY - Getting and Cleaning Data - Project

This is long form data where we each row represents a value for a variable (observation) for activity on a subject.

sample_id: This is the subject who is being tracked. In this study there are 30 subjects

activity_num: This is type of activity that is being tracked. The possible values are:
"LAYING"   "SITTING"   "STANDING"   "WALKING"
"WALKING_DOWNSTAIRS" "WALKING_UPSTAIRS"

variable: From all the different observations outlined in features.txt, we have taken 79 values that are a mean or standard deviation. Literlly, we have filtered these observation by searching for "mean" or "std" (case sensitive)

value: This is the value of the variable for activity_num measured on sample_id
